Professional Summary

Application Security Engineer | DevSecOps Specialist

Security Engineer with 3 years of experience architecting secure CI/CD pipelines (SSDLC) and automating vulnerability remediation. Proven track record of leveraging full-stack expertise (.NET, Angular) to build security tools and reduce Mean Time To Remediate (MTTR). Expert in Threat Modeling (STRIDE) and Zero Trust architecture implementation for cloud-native environments.

Technical Skills

AppSec: SAST, DAST, SCA, OWASP Top 10, Burp Suite, ZAP

Cloud Security: Azure IAM, AWS GuardDuty, Sentinel, Kubernetes Security

DevSecOps: CI/CD Integration, Docker, Jenkins/GitLab CI, Snyk, SonarQube

Compliance: ISO 27001, SOC2, GDPR, NIST CSF

Languages: C# (.NET FrameWork, Core), TypeScript, Python, SQL

Professional Experience

Hubstream India Pvt Ltd — **Chennai, India**

Application Security Engineer & Full-Stack Developer — *Mar 2023 – Present*

Security Engineering & DevSecOps Leadership:

- **SSDLC Implementation:** Architected the Security Software Development Lifecycle, automating **SAST, DAST, and SCA** into weekly tests and nightly build cycles, including Azure Advanced Scans.
- **Threat Modeling:** Performed deep-dive threat analysis on existing and new systems using LLMs and frameworks like **STRIDE and PASTA** to ensure security by design.
- **Compliance Automation:** Orchestrated automated compliance guardrails for GDPR/SOC2 within Azure IAM, reducing manual audit efforts by 20 hours/week and ensuring continuous compliance.
- **Zero Trust Advocacy:** Led the *"Trust Null"* Security Team with the mission of implementing a Zero Trust model and contributing to company-wide security policies.
- **Incident Response:** Handled high-priority incidents including phishing threats, password leaks, and log forensic analysis; found and patched multiple critical security vulnerabilities.
- **Security Awareness:** Organized and executed employee-wide security training programs and phishing simulation campaigns from entry-level to executive leadership.

Product Engineering & Modernization:

- **Secure Deployment & Migration:** Engineered secure-by-default deployment mechanisms using **.NET 9**, eliminating configuration drift and reducing deployment-stage vulnerabilities by 30%. Upgraded TypeScript codebases from **v4.7 to v5.9**.
- **Innovation & R&D:** Contributed to R&D projects including **Playwright/Docker PoCs** for parallel UI testing and optimized marketing tech through SEO/AEO/GEO strategies.

Awards & Recognition

Innovation Award: **Internal Hackathon Winner:** Automated repeated workloads (CSV data creation) using Azure's GPT models before the mainstream AI boom.

Recognition Award: Awarded for exceptional performance in identifying and patching critical production vulnerabilities and stabilizing product quality.

Projects

Academic Project

Blockchain-Based Decentralized Storage System

- Developed a distributed storage system using blockchain, smart contracts, and IPFS to ensure data immutability and secure access control.

Academic Project

AI-Powered Facial Recognition Attendance System

- Built a real-time system using Python, OpenCV, and ML models, achieving 95% recognition accuracy.

Education

BS Abdur Rahman Crescent Institute of Science and Technology **Chennai**

B.Tech in Information Technology

CGPA: 8.75/10

Additional Highlights

- **Invited Guest Lecturer:** Delivered expert sessions on AI and Cybersecurity at various academic institutions.
- **Technical Evangelist:** Actively involved in security policy development and privacy-related challenges at the organizational level.
